MOTORCYCLE FITMENT
AND PRESSURE GUIDE

RIDE WITH CONFIDENCE

WWW.DUNLOPMOTORCYCLE.EU

PERFORMANCE, PRECISION, PASSION

Dunlop produces an extensive range of tires to suit all types of motorcycles from race and supersport bikes to off-road and 125cc machines. We work closely with motorcycle manufacturers, industry experts and our own Motorsport team to ensure that our street tires meet the requirements of one of the world's most demanding customer segments – motorcyclists.

Choosing the correct tire for your motorcycle may seem like a daunting prospect – tire selection depends on the make and category of bike as well as purpose. However, our fitment and pressure guide simplifies the process. In addition, thanks to rigorous testing in extreme conditions, our motorcyclists can be assured of the reliability, value for money and strong reputation of Dunlop tires.

RIDE WITH CONFIDENCE

Our engineers and designers across Europe, Japan and North America are committed to developing high-performance street tires. Sharing our expertise on global projects involving R&D, innovation, testing, Original Equipment (OE) and Motorsport enables us to capitalise on our strengths. This results in the mass production of high-quality products, which continue to perform well in independent tests.

However, our work is never complete. We are continually developing and testing new technologies and compounds in order to further improve our street tires so that you can always ride with confidence.

FROM RACE TO ROAD

We use our racing experience to develop and improve the performance of our street tires and many of the technologies we use in our modern motorcycle products were initially proven on the track. Dunlop engineers were the first to apply race tire performance standards to street tires. Low profile tire shapes, radial constructions, directional and cosecant curve tread designs, aramid casing materials and Multi-Tread (MT) Technology were all developed through racing.

200TH CONSECUTIVE VICTORY

2008 marked a year of significant importance for Dunlop in Grand Prix racing. Our 200th consecutive 250GP victory was achieved by Marco Simoncelli at Motegi (Japan) in September, meaning that every quarter-litre race since 1996 has been won on Dunlop tires.

The 50th win was achieved by MotoGP Champion Valentino Rossi at the 1999 British GP, Marco Melandri achieved the 100th win at Brno (Czech Republic) in 2002 and Casey Stoner delivered the 150th win at Sepang (Malaysia) in 2005.

MULTI-TREAD (MT) TECHNOLOGY

Multi-Tread (MT) Technology is our latest innovation. Years of success in global Superbike, Endurance and GP championships have resulted in the development of a pioneering multi-compound, which is transferred to many of our current Sportmax track and road products.

HOW MT TECHNOLOGY WORKS

The central traction compound contacts the road when the motorcycle is upright. It uses a tougher, cooler-running compound that maintains straight-line stability, traction, braking and longer tread life.

The lateral compound contacts the road when the motorcycle is leaned over. It incorporates a rubber compound, which is developed specifically to enhance grip at maximum lean angles.

JOINTLESS BELT CONSTRUCTION

All our Sportmax street tires are designed using a combination of Computer Aided Design (CAD) technology and Finite Element Analysis (FEA) as well as JointLess Belt (JLB) construction (either front or rear).

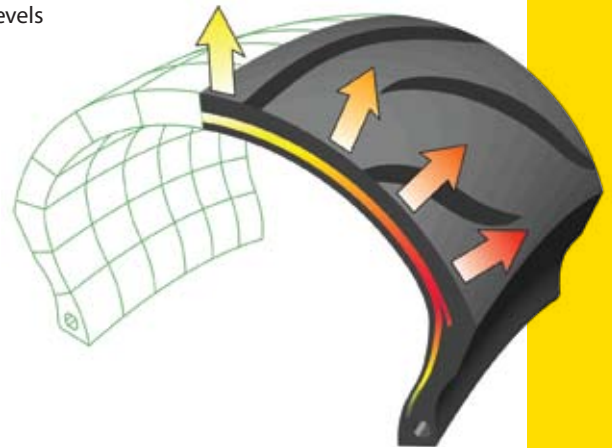

The use of JLB construction eliminates the belt overlaps that can be found in some tires, resulting in smoother handling. This type of construction also minimises dynamic growth of the tread centre at high speeds, maintains a stable contact patch and reduces distortion and excessive heat build-up.

CARCASS TENSION CONTROL SYSTEM

Many of our front and rear tire constructions use a Carcass Tension Control System (CTCS) to control casing stress distribution. This optimises the tension in different areas of the casing improving cornering stability, straight-line traction and rider feedback, so that you can ride with confidence.

- / Allows different areas of the tire casing to be designed with different tension levels to distribute forces in a more progressive way
- / Controls stress distribution to provide an optimised contact patch area at different lean angles
- / Achieves better control without the use of additional components, thus reducing tire weight
- / Improves suspension characteristics, reducing steering effort and improving rider feedback.

ORIGINAL EQUIPMENT

Original Equipment (OE) fitments are developed in conjunction with motorcycle manufacturers at an early stage in a bike's development. The OE tire supplier for a new model will be selected according to its fit with the characteristics of the bike and its intended purpose. Dunlop technicians work closely with a motorcycle manufacturer to develop OE fitments until the desired level of performance is achieved.

WE'RE PROUD TO BE THE OE TIRE SUPPLIER ON SELECTED MOTORCYCLES BY THE FOLLOWING MANUFACTURERS:

ON ROAD

Whether you're a club racer or adventure bike enthusiast, ride a high-performance sports bike or a cruiser, we'll have a fitment to suit. We're continually expanding our already extensive range of street tires so you can choose the best tire for your requirements and make the most out of your motorcycling experience – whatever machine you ride.

THE SPORTMAX FAMILY

EASY RACING

GP RACER D209

We know race tires. Developed by our highly experienced Motorsport team and European motorcycle departments, this competitive race and track day tire is also suitable for self-assured street riders looking for maximum performance and an improved motorcycling experience.

The GP Racer D209 is renowned for its high-speed stability and accurate steering capabilities, which consequently instils confidence when braking and entering corners. Thanks to testing in extreme conditions, it can also be relied upon in all kinds of weather.

The Multi-Tread (MT) GP Racer D209 utilises the tread pattern of our championship-winning Sportmax GP and delivers unparalleled dry grip, fast warm-up times and superb handling. Its lateral grip compound delivers increased grip at maximum lean angles.

The GP Racer D209 is also available in slick design for track use only. GP Racer Slicks offer confidence-inspiring grip and feel, but without the negative characteristics of full-on, slow-to-warm race slicks. An accomplished sports tire, it is essentially a GP Racer D209 without the tread.

- / Stiffer traction compound for hard acceleration/braking and straight-line stability
- / Front tires with two-cut breakers and two-ply carcass improve linear steering
- / Minimum percentage groove area in the shoulder increases grip at maximum lean angles in the dry
- / Optimised JointLess Belt (JLB) rear construction results in high-speed stability, handling, grip and shock absorption.

HYPERSPORT/SUPERSPORT

SPORTMAX QUALIFIER RR

The critically-acclaimed Sportmax Qualifier RR is specially designed for motorcyclists who want to experience the same high-octane excitement that comes from having a race bike, every time they ride. Tested and recommended by European journalists as an excellent road performance and track day tire, it appeals to riders' desires for perfection and success.

Inspired by the all-conquering Sportmax GP racing tire, the Sportmax Qualifier RR offers excellent dry road grip. Multi-Tread (MT) Technology also enables shorter warm-up times without compromising stability, wear or wet performance, thus helping to ensure rider safety.

- / Increased tread pattern for extreme lean angles and smooth transitions at high speeds
- / Stiffer traction compound to improve tread life, traction and stability
- / Lightweight casings and adapted profiles deliver responsive handling on the road
- / JointLess Belt (JLB) rear tire construction enables superb high-speed stability and shock absorption
- / Sportmax GP-derived tread design efficiently shifts water and optimises tread stiffness for improved handling response
- / High percentage groove in the central area for maximum performance in all weather conditions.

HYPERSPORT/SUPERSPORT

NEW

SPORTMAX
QUALIFIER II

The high-performance Sportmax Qualifier II is designed with real riders' needs in mind. The Qualifier II supersport tire delivers non-stop road feedback and razor-sharp handling accuracy and benefits from improved wet road grip.

The Qualifier II is the perfect tire choice for supersport riders looking for high levels of performance and mileage as well as confidence-inspiring handling. Carcass Tension Control System (CTCS) technology allows different areas of the tire casing to be designed with different tension levels, which control local area stiffness for better suspension capabilities.

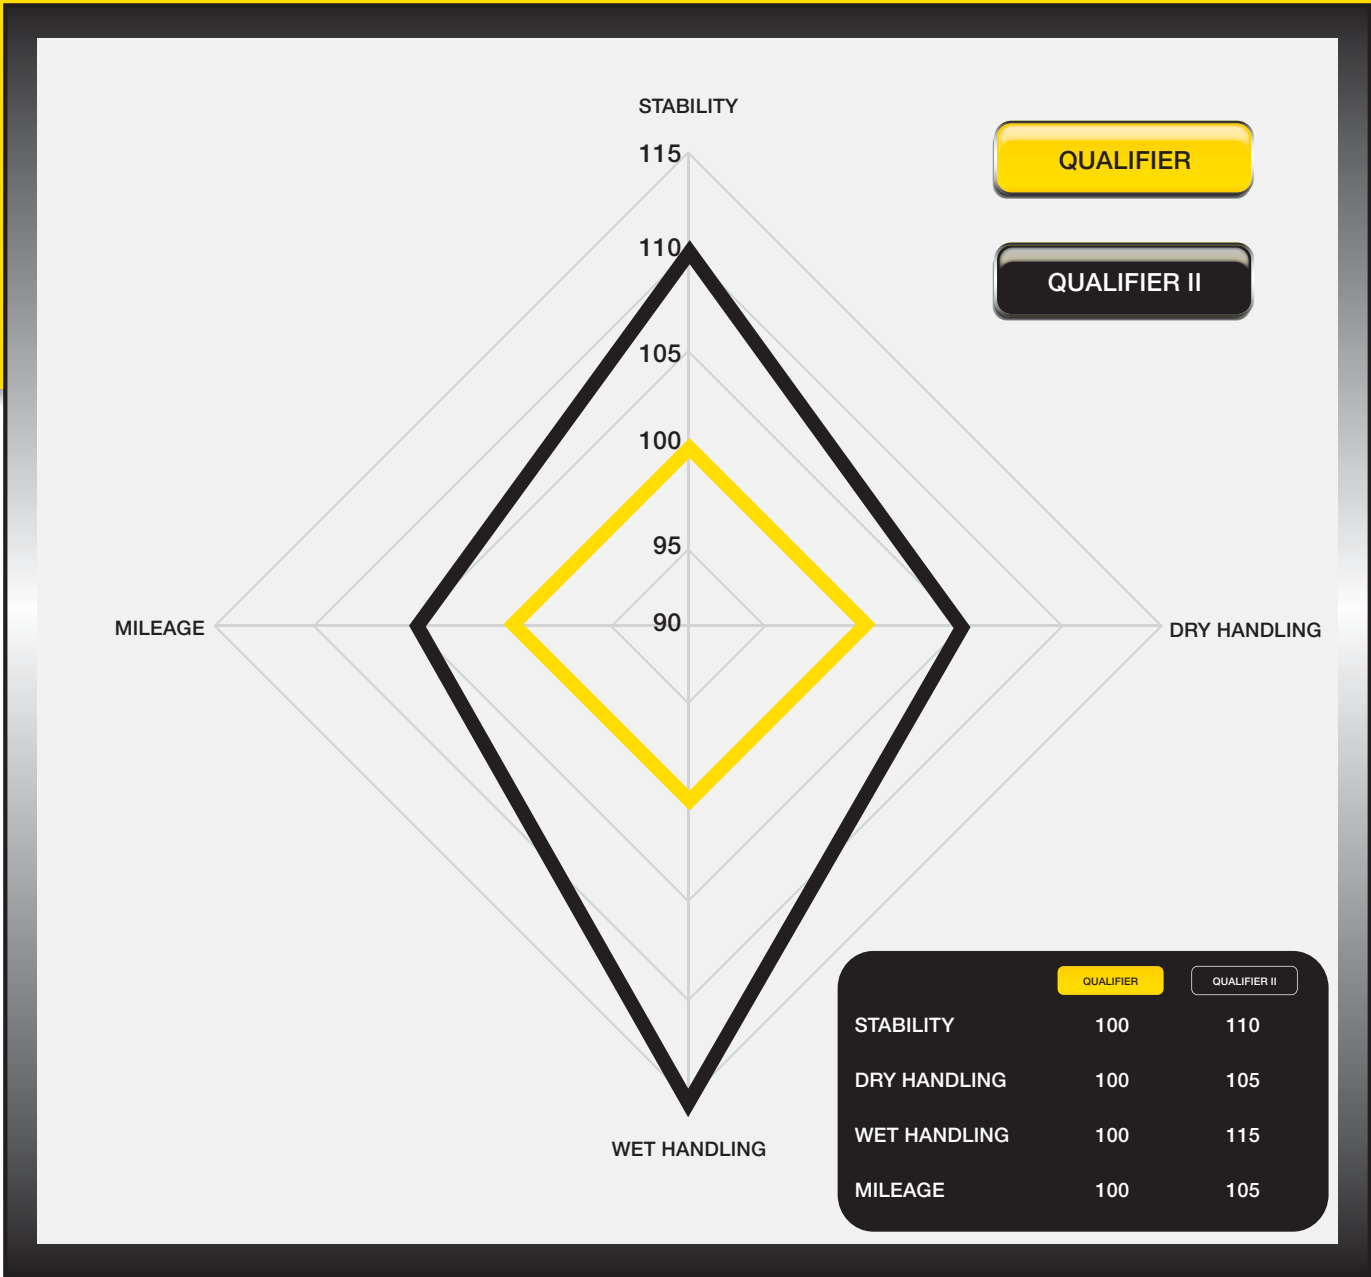

- / Directional tread design optimises pressure distribution to allow smoother performance and reduced step wear
- / New and unique compound enables a wide range of operating temperatures for fast warm-up time and enables excellent wet and dry road grip without sacrificing tread wear
- / The Multi-Tread (MT) profile shapes are designed to maintain a more consistent contact area with the road and minimise steering geometry changes when cornering
- / Lightweight casings deliver responsive, yet progressive handling
- / JointLess Belt (JLB) rear tire construction enables superb high-speed stability and shock absorption.

SUPERMOTO/ROADSTER

SPORTMAX MUTANT

The Sportmax Mutant has been specially developed for the challenging demands of supermoto street bike riders. Its aggressive tread pattern, lightweight casings and optimised profiles give an instant handling response, which has been commended by European magazines. Rigorously tested, it also offers excellent grip, even in the worst weather or riding conditions.

- / Lightweight casings, specific mono-ply construction on front and JointLess Belt (JLB) constructed rear combined with an open tread pattern, allow the perfect tire softness for lighter supermoto bikes
- / Wide footprint and lively handling allow superb manoeuvrability and quick turn transitions, plus total control when sliding through corners
- / Front and rear selected tread compounds offer durability and grip on wet and dry surfaces
- / Aggressive tread pattern allows high performance in all conditions, including on and off-road.

SPORT TOURING

SPORTMAX ROADSMART

The Multi-Tread (MT) Sportmax Roadsmart has revolutionised the sport touring sector since its launch in 2008. An all-round performer, it offers a wide variety of fitments from roadster and naked to GT and supersport bikes.

Praised for its straight-line stability, and superb handling on the track, road and in wet weather conditions by leading European journalists, it has been rated as a leading sports touring tire in comparison tests. Overall, the Sportmax Roadsmart gives savvy riders the best combination of mileage, grip, handling and stability.

- / Unique tread pattern design with higher sea/land groove distribution and deeper tread grooves in the central area to maximise performance in the wet
- / Two new compounds with tailor-made silica optimise the balance between wet grip and mileage
- / New durable polymers offer longer tread life and maximum grip
- / Front JointLess Belt (JLB) construction gives better feedback and enhanced linear steering properties
- / Flex Steel JointLess Belt (FS-JLB) construction uses adapted JLB cord density between the front and rear to provide improved shock absorption, riding comfort and stability
- / Optimised variation of contact area at different lean angles gives smooth handling.

SPORT TOURING

ARROWMAX GT501

Despite the growing number of high-performance Japanese and European bikes on the market, many motorcyclists still prefer to ride older machines such as the BMW R90/S, Honda CB750 and Kawasaki Z1.

Tires are just as important to classic motorcycle enthusiasts, who want to take advantage of the latest design technologies and developments in the industry, but still want to retain the authentic appearance of their machine. The Arrowmax GT501 is a mid-range sport touring tire that has been tested in the most challenging of riding conditions and provides the perfect balance of old and new.

- / Latest generation construction using cross-ply and casing materials helps to deliver predictable handling, high-speed performance and excellent comfort
- / Unique tread pattern enhances wet grip and steering, improves wear resistance and accelerates water drainage
- / Increased tread depth results in extra mileage
- / Tire profile creates a larger contact patch for superb cornering and handling
- / New generation tire compound improves grip in cold and wet conditions.

CUSTOM

ELITE 3

The Elite 3 has class-leading wet road grip and excellent durability. Tread groove design reduces reaction to road imperfections and contributes to good wear. Its optimum profile shape has also resulted in superior straight-line stability and greater cornering agility, giving a more secure feeling when leaned over.

The Elite 3 Bias suits a wide range of large touring motorcycles as well as some of the most popular cruisers, while the Elite 3 Radial, which is a wide tire option, will certainly make a big impression!

CUSTOM

D404

The D404 is based on Harley-Davidson's legendary tread pattern and is designed for high mileage and heavy loads. The D404 delivers increased riding comfort with reduced rolling noise and is available with either black or white sidewalls.

- / Bias-ply construction enables smooth and comfortable riding
- / Tread compound and pattern delivers excellent mileage and wet and dry road grip
- / Off-set centre tread groove delivers superb straight-line stability.

D407

We worked closely with Harley-Davidson engineers to develop this Original Equipment (OE) fitment on the Rocker™ and Rocker™ C, selected Screamin' Eagle® and Softail® motorcycles. Dunlop's exclusive rear tire Multi-Tread (MT) Technology is fitted on 2009 FL touring models.

The D407's bold tread pattern has angled lateral grooves that release water away from the contact patch for improved wet weather performance. The computer-optimised tread profile also maximises handling capabilities, while the rear tread compound provides outstanding dry grip.

ON/OFF-ROAD

Off-road riding used to be a weekend leisure activity for many motorcyclists. However, navigating tricky dirt tracks and technical rocky trails is growing in popularity with the increasing number of trail and adventure bikes on the market. We provide a range of fitments for motorcyclists who want to experience the thrill of off-road and the practicalities of street riding, but don't want to change their bike, or tires, in between.

ADVENTURE AND TRAIL

TRAILMAX

The Trailmax is Dunlop's original on/off-road tire and has been specially designed for larger capacity street bikes. As well as being fitted as Original Equipment (OE) on a high proportion of Japanese and European motorcycles, an extensive fitment list covers a variety of 19" and 21" front, and 17" and 18" rear tire sizes.

The Trailmax optimises durable, nylon-ply construction for total riding confidence both on and off-road. Tested in extreme conditions, this tire has a high contact, directional semi-lug, multiple-edge pattern, which is well suited to dry and rocky conditions.

TRAILMAX D607

We've combined our Sportmax and Trailmax road tire technology to develop the Trailmax D607 for 400-1200cc road-orientated adventure bikes.

Although it has an obvious off-road pedigree, it performs well as a street tire on bikes such as the Honda Varadero, BMW GS models and the Suzuki V-Strom. The D607's tried and tested H/V-speed ratings also suit big, dual-purpose sports bikes that are mainly used on the road.

- / The rear tire's JointLess Belt (JLB) radial construction enables excellent high-speed stability and controls efficiency of the contact patch by eliminating distortion
- / JLB delivers improved grip and traction capabilities without sacrificing tread life.

OFF-ROAD

Off-road riding comes in many forms – from the unforgiving deep ruts of a closed motocross circuit to the powdery sand dunes of a beach race, or the riverbeds of an enduro course to a tough rocky trials stage. Off-road riding places a huge amount of stress on a motorcycle and its rider as well as the tires, so it's essential that only reliable, tried and tested products and fitments are selected.

GEOMAX MX11

The Geomax MX11 delivers superb performance in sandy conditions.

- / Outstanding traction on sandy terrain
- / Excellent stability on uneven surfaces including whoops and ruts
- / Cross knobs in central pattern increases tread life on hard packed surfaces.

Geomax MX11	Rear	110/90 - 19	62M	TT		624787

NEW

GEOMAX MX31

The Geomax MX31 has been specially developed for mini-cross machines. Ideally suited to soft-terrain, it incorporates innovative features that allow it to dig deeper than the previous-generation D773, delivering improved traction in loose and challenging conditions.

Patented, chiselled shoulder blocks taper to a smaller point, allowing the knobs to grip firmer ground beneath the softer layers of dirt and sand. In order to aid traction, our designers have created a wider tread profile and a more open pattern in the centre of the tread by limiting the overall block surface area.

In the shoulder area, the land/sea ratio is optimised and the shoulder blocks feature a more rounded shape, allowing the knobs to cut through soft terrain rather than float on the surface.

- / Cross-stitch shoulder block distribution enhances traction and grip in soft to medium riding conditions
- / Utilisation of large-radius block bases deliver increased durability
- / Tie-bar design connects and reinforces the tread blocks for greater tread stiffness and permits improved performance in soft to medium terrain
- / Distinctive recess design in the area between tread blocks provides better rider comfort.

MOTOCROSS

NEW

GEOMAX MX51

The intermediate-terrain Geomax MX51 utilises an all-new tread pattern that improves performance in straight-line traction, cornering grip, handling, braking, bump absorption and durability compared to the D756 series.

Side-by-side comparison tests reveal a more open centre-tread area for improved straight-line acceleration and more tread volume (greater land/sea ratio) in the shoulders for excellent cornering grip.

- / Front tire tread blocks feature recessed edges to provide improved traction and better grip over a wide range of terrains
- / Cross-stitch shoulder block distribution enhances traction and grip in medium/medium-hard riding conditions
- / Shoulder block bases have a larger radius for increased strength and durability
- / Tie-bar design connects and reinforces the tread blocks for greater durability, chunking resistance and overall better performance
- / Shallow recessed areas between tread blocks provide better rider comfort.

NEW

D952

The D952 is designed specifically for off-road leisure enthusiasts.

The D952's tread pattern is a modified version of our popular D752, increasing the radius at the base of the knobs and resizing them slightly to make them more durable. Our engineers also developed an all-new compound that delivers superb grip and excellent durability, resulting in a range of tires that continue working hard in a wide variety of conditions.

- / Value-priced off-road tire handles a wide variety of terrain and conditions
- / High durability construction for long wear and greater traction
- / Based on the popular D752 tire, but modified for outstanding durability.

ENDURO

GEOMAX ENDURO

The Geomax Enduro is a street-legal competition tire that has been tested in extreme conditions and conforms to current FIM regulations. We consulted with some of the world's most experienced enduro riders to develop a tire that gives adventurous riders increased traction, superior corner grip and improved wear on all types of terrain.

The Geomax Enduro has an adapted carcass to suit the demanding requirements of enduro machines and this, coupled with the new profile, increases durability and handling. The larger profile also provides better feedback, which allows you to stay in control of your bike and push the boundaries with confidence.

TRIALS

D803

The difference between first and second place can be a matter of millimetres or seconds. A tire that delivers extraordinary suppleness, grip and strength can make all the difference.

The D803 is the first choice of both professional and amateur trials riders. Its supple casing and advanced rubber compounds deliver better shock absorption and traction, while stiff beading enhances rear rim stability and turning ability. If you want to win, there's no better tire choice.

TECHNICAL INFORMATION

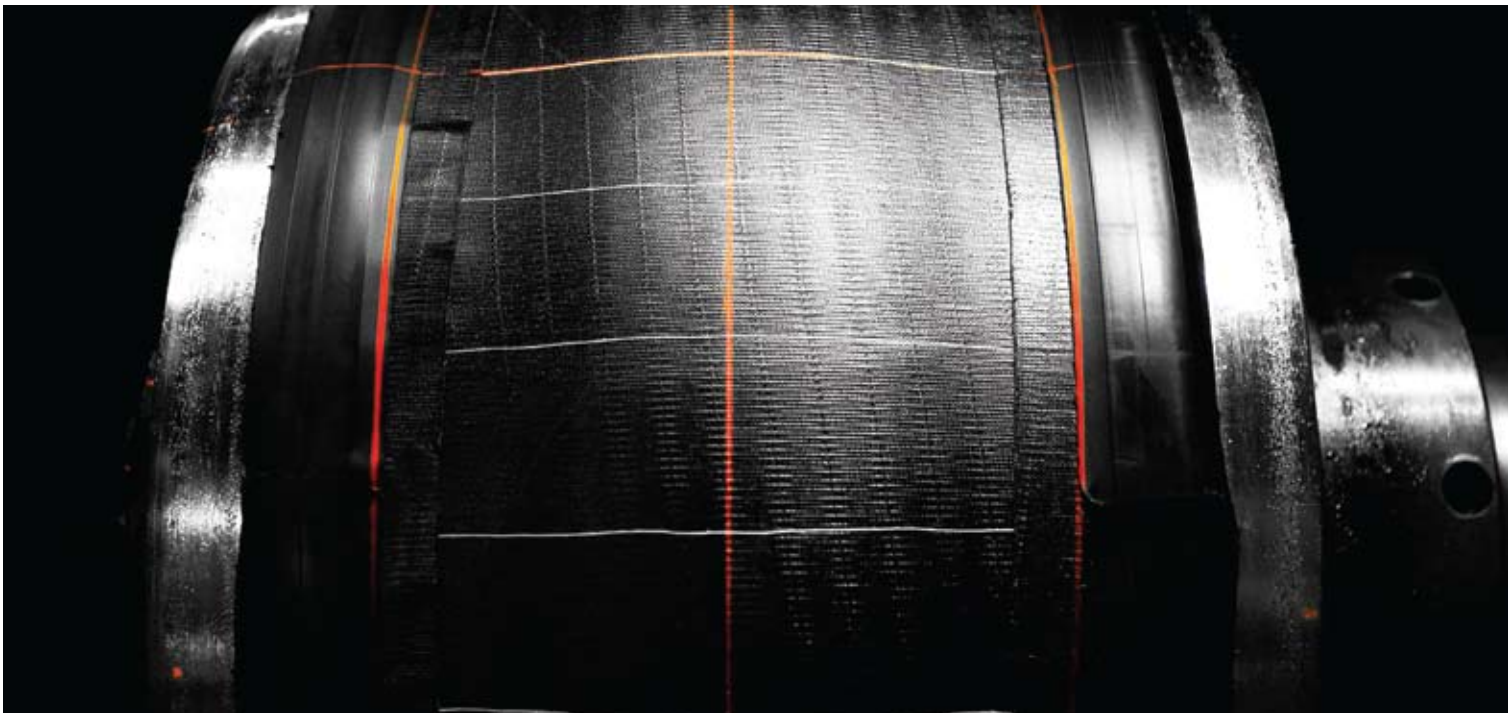

EUROCODE TYPE REF DIAMETER FOR VALVE SIZES

- ① Motorcycle tire (mandatory only for bead diameter 13 and above)
- ② Load index and speed symbol
- ③ Maximum load and pressure, US and Australia
- ④ Mould number
- ⑤ Brand name
- ⑥ Country of origin
- ⑦ Commercial name
- ⑧ DOT Code
- ⑨ European Homologation Number and Code of Authorising Country
- ⑩ Pattern designation
- ⑪ Direction of rotation
- ⑫ Tire intended for tubeless or tube type
- ⑬ Details of construction of the carcass
- ⑭ Size description: width, aspect ratio, tire construction, bead diameter
- ⑮ Week and year of manufacturing

LOAD INDEX (Kg) SPEED INDEX (Km/h)

LOAD INDEX	Kg	LOAD INDEX	Kg	LOAD INDEX	Kg	SPEED INDEX	Km/h
21	82.5	42	150	63	272	F	80

MAINTENANCE AND REPLACING TIRES

FRONT AND REAR TIRE MATCHING

Correct matching of front and rear tires is essential in order to obtain optimum performance and handling. Please follow the tire selection guidelines and consult the motorcycle manufacturer before making modifications from stock.

- / Only mount tires marked "front wheel" on front positions and tires marked "rear wheel" on rear positions
- / A new front tire with a worn rear tire can cause instability
- / Mixing radial tires with bias or belted bias tires may adversely affect handling and stability
- / Many factors – other than tire incompatibility – can affect the handling of a motorcycle, including the weight and height of the rider, mixing worn with unworn tires, and the fitment of luggage or fairings.

TUBES

Tubes are a crucial part of the tube-type wheel assembly and should be treated with respect. When fitting a new tire on a rim that requires a tube, a new tube should also be fitted. Old tubes can become stretched, and old tubes within new tires can crease and fail due to thinning of the tube rubber. Tubes should only be repaired by an expert.

- / Secure tube valve assembly to rim with care
- / Inspect rim band and consult motorcycle dealer for correct rim band replacement
- / Always check the size markings on the tube to assure that the tire size appears on the tube
- / Do not fit tubes in radial motorcycle tires, nor fit radials on rims requiring tubes, unless the tubes bear matching size and radial (R) markings.

TUBE-TYPE RIMS

Only mount tires as tubeless when recommended by the wheel manufacturer. Some spokeless rims require tubes. With a tube inserted, a tubeless tire may be fitted to a tube-type wheel.

TIRE PRESSURES

Always follow pressure recommendations shown on the Dunlop Motorcycle Tire Application Guide. Please contact Dunlop if the year and model are not shown on the current guide, and the owners' manual does not list pressure settings.

DUNLOP TIRES

Please note that hard cornering, carrying passengers and heavy loads, and sustained high speeds will require higher pressures (up to that indicated on the sidewall). Checking tire pressures is the most important tire maintenance function you can perform.

Under-inflated tires can result in imprecise cornering, higher running temperatures and overheating cracks, irregular tread wear at the edge of the contact patch, fatigue cracking, overstressing and eventual failure of the tire carcass. Over-inflating tires does not increase load-carrying capacity, but will result in a hard ride and accelerated tire wear in the centre of the contact patch.

Always check cold tire pressure frequently with a good quality gauge that holds a reading, especially before long-distance trips. Loss of pressure may occur due to worn or badly seated valve cores.

Always check valve cores. If necessary, tighten for correct seating, or remove and replace them. A metal or hard plastic valve cap with an inner gasket should be used and installed finger tight to protect the valve core from dust, moisture and to help maintain a positive air seal.

Repeated loss of inflation pressure may result from undetected tire damage. Visually inspect tires for punctures, cuts, abrasions, cracks, bulges, blisters or knots. It is necessary to dismount the tire to complete an inspection for internal damage and any need for repair. Only certain punctures in the tread area may be repaired, and only if no other damage is present. Please also see the tire repair section.

Tires with non-repairable damage must not be used again. Damage caused by impacts, penetrations or continued under-inflated/overloaded use is progressive and can result in sudden and complete tire failure and accident.

Always seek expert inspection of the dismantled tire following curb, chuckhole or other impacts, evidence of penetration beyond the tire surface, bulges or low pressure. Do not continue riding on damaged tires.

Inspect your tires frequently for imperfections and always heed warning signs such as vibration, handling instability, rubbing or tire noise that occurs while riding the motorcycle.

SPEED RATINGS

S, H, V, and Z ratings (where applied) are indicative of high-performance capability based on Dunlop indoor wheel testing and are not valid for damaged, altered, repaired, excessively worn, under-inflated or overloaded tires. Dunlop does not recommend the use of any of its products in excess of legal speed limits. Please consult the owners' manual for recommended speed rating.

RUN-IN PERIOD

Replacements for worn, differently patterned or constructed tires will not react in the same way. When new tires are fitted, they should not be subjected to maximum power, abrupt lean-over or hard cornering until a reasonable run-in distance of approximately 100km has been covered. This will allow the rider to become accustomed to the feel of the new tires or tire combination and achieve optimum road grip for a range of speeds, acceleration and handling use.

Check and adjust inflation pressure to recommended levels after tire cools for at least three hours following run-in. New tires will have a different contact patch and lean-over edge. New tires, mixing a new tire with a worn older tire, and mixing different pattern combinations require careful ride evaluation.

MAINTAINING CLEARANCE

Consult the motorcycle manufacturer if you intend to mount sizes other than indicated in the owners' manual. The tire's physical dimensions are important.

Adequate clearance of fenders and swingarm etc. must be maintained. Increasing tire size may require an increase in rim width. When increasing tire size and/or rim width, rotate wheel and inspect closely for sufficient clearance.

TIRE MODIFICATIONS

Dunlop neither recommends nor warrants re-treading, re-grooving, siping, inserts, sidewall lettering, inlays or additions, nor any other modification or alteration of Dunlop motorcycle tires, except as noted in the tire repairs section.

WHEEL BALANCE

It is essential that tire/wheel assemblies are balanced before use and rebalanced each time the tire is removed or replaced. Unbalanced tire/wheel assemblies can vibrate at certain speeds, and tire wear will be greatly accelerated.

All Dunlop street tires should be installed with the yellow balance dot at the valve. Wheels may be balanced with spoke nipple weights, lead wire or self-adhesive rim weights. Please consult the motorcycle manufacturer for approved wheel weights.

TIRE REPAIR

Some punctures in motorcycle tires may be repaired. Dunlop recommends only permanent patch/plug repairs of small (maximum 1/4-inch diameter) tread area punctures from within the dismounted tire by a qualified tire repair shop or motorcycle dealer. Never perform an exterior repair and never use an inner tube as a substitute for a proper repair.

Speed should not exceed 80kph (50mph) for the first 24 hours after repair, and the repaired tire should never be used at speeds higher than 120kph (75mph). Check inflation pressure after tire cools for at least three hours following run-in, or sooner if air loss is suspected.

No form of temporary repair should be attempted because secondary damage caused by a penetrating object may not be detected and tire or tube deflation may occur at a later date.

Dunlop does not recommend the use of liquid sealants. These are a form of temporary repair, and may adversely affect ply material and mask secondary damage caused by a penetrating object. Reliance upon sealants can result in sudden tire failure and accident.

MAINTENANCE AND REPLACING TIRES

DUNLOP MOTORCYCLE TUBELESS TIRE REPAIR INFORMATION

Dunlop recommends only permanent repairs performed from the inside of the tire, using a combination patch/plug method. Never attempt a repair from the outside, or inject a sealant, or simply use an inner tube, patch or plug as a substitute for a proper repair.

Only a qualified tire repair shop or motorcycle tire dealer should perform repairs. Inspection of the tire and adequacy of repair becomes the responsibility of the person actually performing the repair and Dunlop does not warrant the results of a repair in any way.

Before any repair is attempted, a tire must be removed from the wheel and thoroughly inspected. The following are minimum guidelines for the repairer. Tires should not be repaired if any of the following conditions exist:

- / a tire has been previously injected with a sealant/balancer
- / the puncture is larger than 6mm (1/4-inch) in diameter
- / the puncture is not perpendicular to the carcass
- / the puncture is in the tire sidewall
- / separation of plies, tread separation, separation of any other components
- / cut or broken ply cords
- / broken or damaged bead wires
- / cut or damaged chafers (bead area)
- / deterioration of the carcass inside the tire due to "run flat" or under-inflation
- / cracks or other damage to the integrity of the inner liner
- / excessive wear – tire should have at least 1/32 of an inch of tread depth, excluding tread wear indicators
- / cracks in sidewall or tread
- / impact breaks, cuts, snags or gouges that penetrate the surface.

Please note

- / There should be no more than one repair per tire
- / The wheel itself must be in good condition. A cracked or bent wheel may lead to loss of air and cause subsequent deflation of the tire
- / Following repair, the valve assembly should be replaced and the tire/wheel rebalanced
- / Speed should not exceed 80kph (50mph) for the first 24 hours after tire repair and the repaired tire should never be used at speeds higher than 120kph (75mph).

The repairer is solely responsible for instructing the motorcyclist as to the restrictions to be placed on tire use following repair. In summary, no form of temporary repair should be attempted. Motorcycle tire repairs leave no room for error and any doubt as to inspection or adequacy of repair should be resolved by discarding the tire.

Be sure to consult our Motorcycle Tire Limited Warranty, Care and Maintenance brochure for additional information regarding the use of Dunlop tires. Seek a qualified motorcycle tire repair centre for more details. Never attempt to repair a damaged tire without the assistance of an experienced tire mechanic.

RIM SIZE

Correct rim width is crucial to handling and stability. A tire that is installed on a rim wider than recommended will have a flattened profile and a rider may easily reach the edge of the tread during cornering. A narrow rim will alter the tire profile, concentrating tire wear in a very small area during cornering, with a smaller contact patch during braking. Please remember that tire clearances are important.

DYNAMOMETER TESTING

Never put a tire in use that has been subjected to on-the-motorcycle dynamometer engine testing. This severe use of the tire may result in tread compound degradation and subsequent failure.

MOTORCYCLE MAINTENANCE

Dunlop strongly recommends regular inspection of the motorcycle generally, and of wheels in particular. Tire mileage and performance are adversely affected by a poorly maintained vehicle.

Take your motorcycle to your dealer for regular maintenance checks, inclusive of tire inspections.

Maintain suspension settings in strict compliance with the vehicle owner's manual. Improperly maintained components and incorrect or unbalanced front fork pressures will affect stability. Low suspension pressure will generate excessive tire stresses.

TIRE MOUNTING

Caution: only specially trained persons should mount tires. Improper mounting can cause tire explosion and serious injury. Please follow these mounting precautions:

- / always wear approved eye protection
- / clean and lubricate beads without grease but using soapy water
- / centralise rim band and tube to prevent pinching if tube-type rim
- / note directional arrows on sidewall where applicable
- / lock assembly on mounting machine or place in safety cage before inflating to seat beads
- / set air hose relief valve at 40 psi
- / use extension gauge and hose with clip-on air chuck.

Stand back with no part of your body within the perimeter of the assembled tire and rim:

- / inflate with core in valve stem
- / never inflate above 40 psi to seat beads*
- / spin wheel to check bead seating and alignment.

*If the beads do not seat by 40 psi, deflate and repeat above procedures. Never use a volatile substance or rubber "donut" to aid bead seating. If the tire is a tube-type, deflate and re-inflate after seating to prevent tube wrinkles.

IMPORTANCE OF MOTORCYCLE TIRE INFLATION MAINTENANCE

To ensure optimum safety and maximum enjoyment of your tires you should:

- / check air pressure at frequent, regular intervals, particularly just before and during long trips. Always use an accurate tire gauge** and check pressures only when the tires are cold (i.e. wait one hour after running)
- / inspect your tires as often as possible. Look for irregular wear, any signs of cracking in the sidewalls and tread, blisters, knots, cuts or punctures
- / immediately remove and replace damaged tires.

**Please note: for any dual riding or fully loaded use, 0.3 bar must be added in all Dunlop rear tires.

In addition to following these recommendations, pay attention to your tires while riding. If your steering response is slow or mushy, or if cornering and braking response is heavy, your tires could be under-inflated. Vibration or wobbling may indicate that actual tire damage has occurred and failure is imminent.

If you conscientiously follow our recommendations, you will enjoy better, longer and safer tire performance and many kilometres of riding pleasure.
